

What Is The EasyStart Bluetooth Module?

EasyStart soft start models that end with -BLUE include our built-in Bluetooth module for remote troubleshooting assistance.

The Bluetooth module is designed to provide diagnostic feedback to installers at the A/C unit and to our engineers if needed.

Please note that the Bluetooth module does **NOT** allow you to control your A/C unit as that is a function of the thermostat and A/C control board. It serves only as a sophisticated diagnostic feature.

EasyStart Soft Starter Bluetooth Features: Troubleshooting Module

- Available via our free smartphone app (both iPhone and Android)
- On-the-spot diagnostics for installers and owners
- Built-in technical support submission feature allowing remote diagnostics at Micro-Air
- Troubleshoot issues remotely and safely, no disassembly needed
- Convenient on-demand firmware updates OTA when available
- Need to move EasyStart to a new air conditioner? Our simple remote one touch process allows our soft starter to "learn" the unique properties of the new unit's compressor
